PYGEOVISION · GEOSPATIAL ANALYSIS REPORT

Building Footprints

n/a (published dataset) · 2.8 km²

321	9.7 ha	3.5 %	116.5
Buildings	Total footprint area	Share of the area covered by buildings	Buildings per km²

Executive summary

- 321 buildings from OpenStreetMap fall inside the area, covering 9.7 ha (3.5 % of the area; 116 per km²).
- These are the dataset's polygons, not detections on your own imagery.

> OpenStreetMap: volunteered data. Completeness varies a great deal between places -- good in many towns, thin in rural areas; buildings mapped as multipolygon relations are not included.

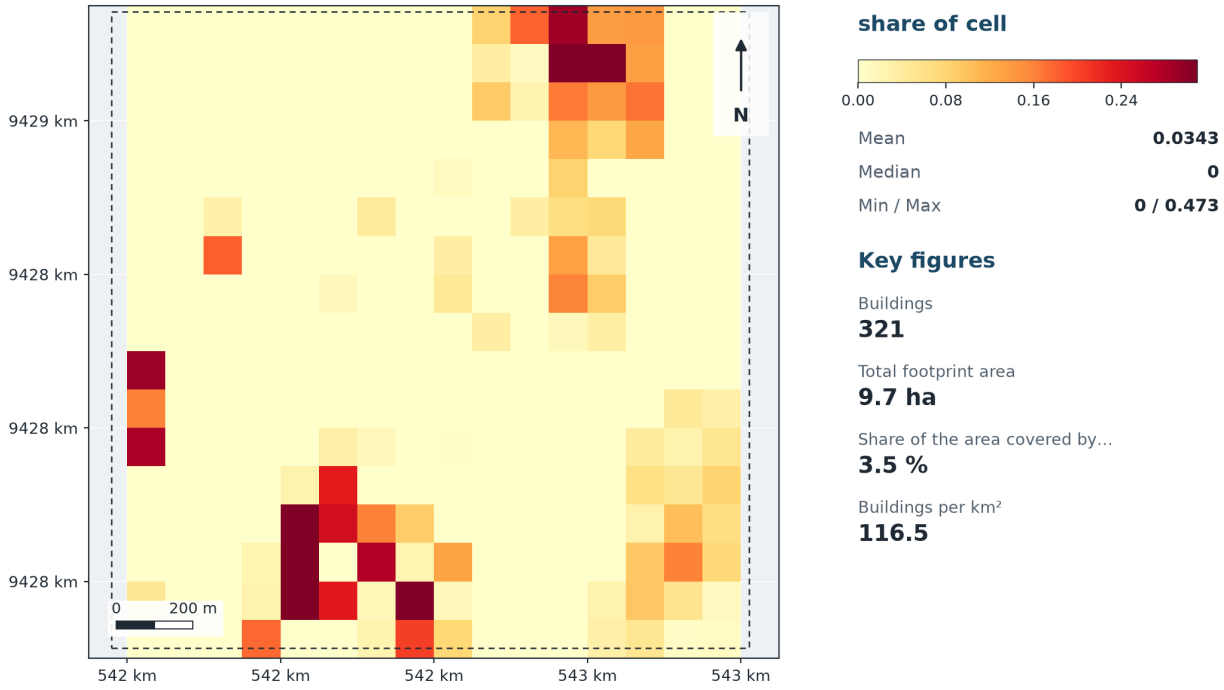

Study area and inputs

Area of interest (west, south, east, north)	-80.6250, -5.1800, -80.6100, -5.1650
Centre	-5.1725°, -80.6175°
Area of interest	2.76 km²
Period	n/a (published dataset)
Output grid	18 × 17 pixels, EPSG:32717

Results

Building Footprints

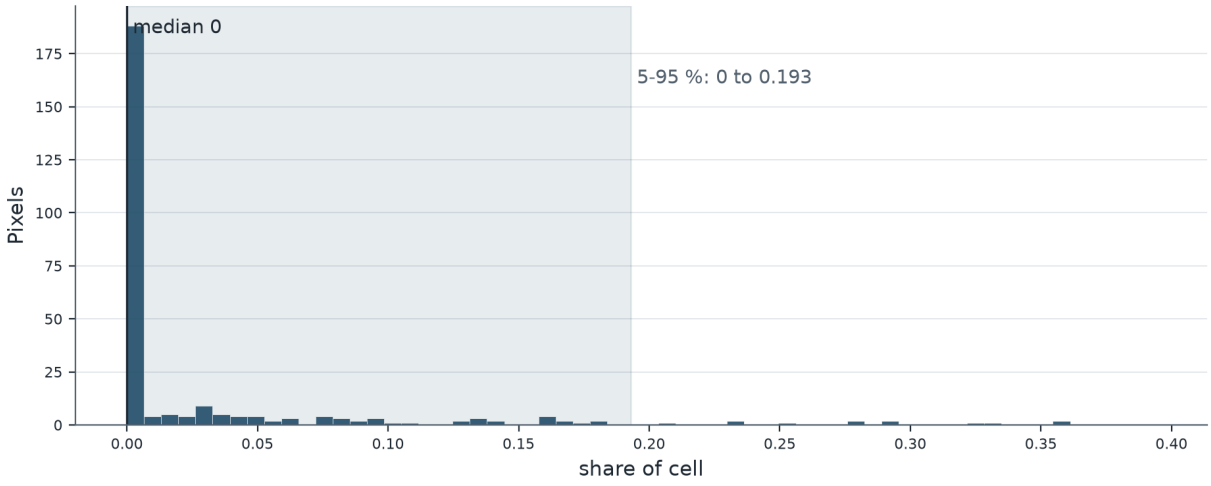

Share of each cell covered by buildings · n/a (published dataset) · AOI -80.6250, -5.1800, -80.6100, -5.1650

CRS: EPSG:32717 · Areas measured from the output raster · No basemap · PyGeoVision 2.2.0 · 2026-10-30 07:12 UTC

Map: Building Footprints

Distribution: Share of each cell covered by buildings

Summary chart

Key statistics (reported by the pipeline)

Measure	Value
Buildings	321
Total footprint area	9.7 ha
Share of the area covered by buildings	3.5 %
Buildings per km²	116.5
Mean footprint (m²)	301.5
Median footprint (m²)	177.0
Highest cell coverage	47.3 %
Area (km²)	2.76

Other statistics

Measure	Value
Source	osm
Cell m	100
Footprints file	piura_out/footprints_osm/building_footprints.gpkg

Value statistics: Share of each cell covered by buildings

Statistic	Value
Minimum (share of cell)	0.000
5th percentile (share of cell)	0.000
25th percentile (share of cell)	0.000
Median (share of cell)	0.000
Mean (share of cell)	0.034
75th percentile (share of cell)	0.028
95th percentile (share of cell)	0.193
Maximum (share of cell)	0.473
Standard deviation (share of cell)	0.077

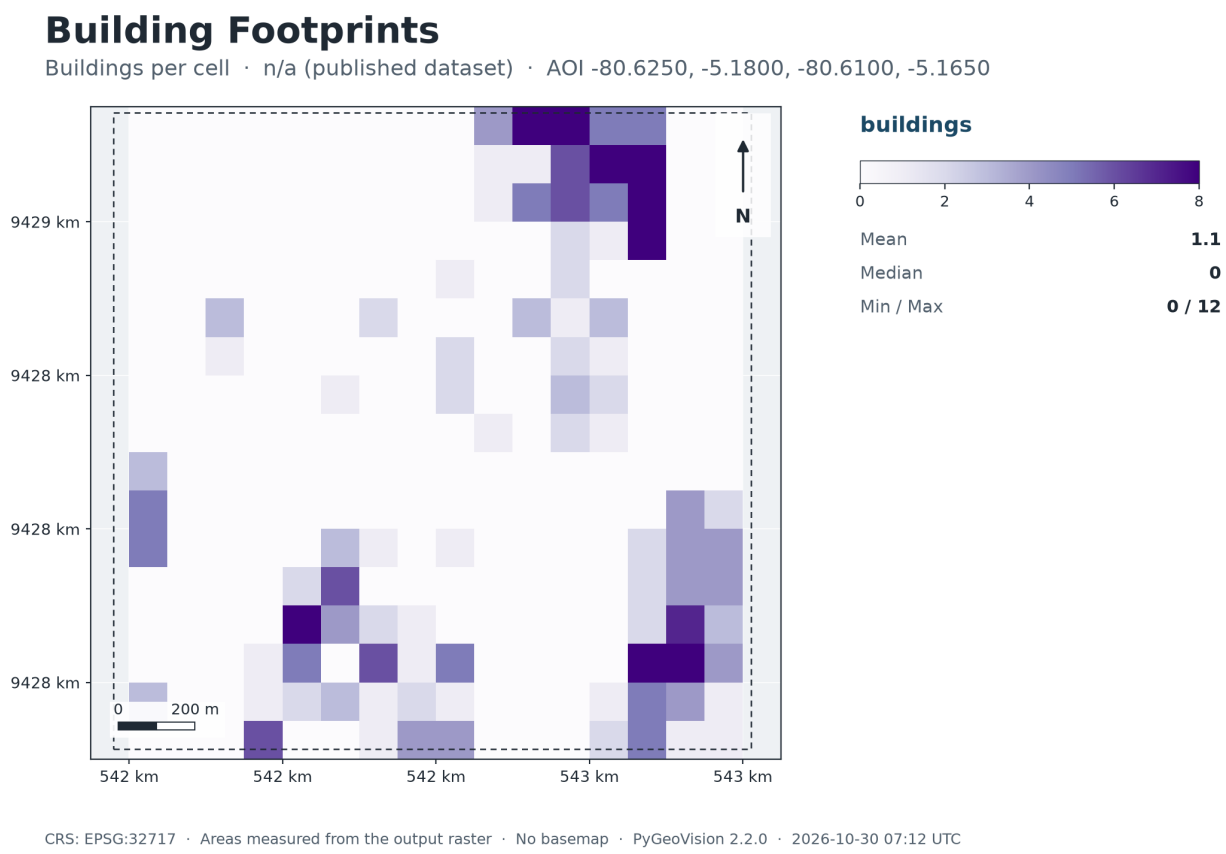

Over 272 valid pixels.

Value statistics: Buildings per cell

Statistic	Value
Minimum (buildings)	0.000
5th percentile (buildings)	0.000
25th percentile (buildings)	0.000
Median (buildings)	0.000
Mean (buildings)	1.099
75th percentile (buildings)	1.000
95th percentile (buildings)	6.000
Maximum (buildings)	12.000
Standard deviation (buildings)	2.170

Over 272 valid pixels.

Additional layers

Map: Buildings per cell

Method and parameters

Where are the buildings in the area, how many, and how much ground do they cover?

Published footprints (default): the polygons of Microsoft's Global ML Building Footprints, Google's Open Buildings v3 or OpenStreetMap are read for the box, clipped to it and measured in the local UTM zone. Nothing is detected on your imagery.

building_density.tif is the share of each cell covered by building area (a building counts in the cell holding its centroid); building_count.tif counts buildings per cell.

With a checkpoint the pipeline instead runs a segmentation network you trained (class 1 = building) and writes building_mask.tif.

Pipeline	building_footprints
Area of interest	-80.6250, -5.1800, -80.6100, -5.1650
cell_m	100
source	osm
period	n/a (published dataset)

Interpretation and limitations

How to read the result

- Dataset footprints differ in date: a recent building may be missing and a demolished one still present.

Limitations

- Published footprints are only as complete, accurate and current as their source; compare the three sources if it matters.
- A building_mask.tif result (only when you pass a checkpoint) is the output of a network you trained and has not been checked against reference data; at 10 m individual houses are not resolvable.

Deliverables

Files

File	Type	Contents
piura_out/footprints_osm/building_density.tif	GeoTIFF raster	Share of each cell covered by buildings

run_summary.json	JSON	Machine-readable record of this run

Vector layers

Layer	Features	Total area (ha)	Note
buildings	321	9.7	

Vector layers made from rasters carry class_id, class_name, color_hex, area_ha, area_m2 (equal-area projection), pct_aoi, cx, cy, pipeline and period; layers a pipeline wrote itself (buildings, roads, streams, fire points) keep their own attributes. Coordinates are WGS 84 (EPSG:4326). The GeoPackage also holds the 'aoi' outline and, for raster-derived layers, a dissolved '<layer>_classes' summary.
